

The best Engine protection for operations

Engine protective covers

Multipurpose: Protect Engine during washing and line maintenance operations, during heavy checks and scheduled maintenance.

Durable: Improves Aircraft storage conditions during intermediate steps.

Reliable: FAR 25 certified materials.
Offers an excellent resistance over a wide temperature range (-55 to + 180°C).

Engine should be kept clean and free of contaminants, which cause irreversible damage.

Cover

DSS 139-1 ind 0

Specifications

Base cloth: Polyester

Coating: Polyurethane topside

Laminated meta-aramid knit reverse side

Total weight: 280g/m² (+/-20g) [≈8,3 oz/lyd²]

Width: 1430 mm [56,3 inches]

Colour: Orange

Fire & Smoke certifications: FAR 25 EN 2310

DGATA M-09/9726101/A

Resistance to cold temperature ISO 4675

Test Report IFTH LYC-09-3696

Non-contractual values

Advantages

- Flame retardancy FAR25 (for on-board equipment)
- Suitable with aircraft paints, acrylics and titanium
- Excellent resistance to cold certified at -55°C/-67°F (dynamic test according to ISO 4675)
- Excellent contact and convective heat resistance up to 180°C (356°F)
- Excellent UV resistance
- Lightweight
- Frost does not stick on fabric
- Chemical resistance (coated side) : Skydrol 500 B4 & LD4 - ASTM oils - Diesel - MEK - Alcohol - Sulphuric acid - Ammonia
